

Generative Artificial Intelligence

By: Eugene Graves, Fadi Meleika, Gina Shafik, and Justin Nguyen

Project Prompt

New technology is now capable of communicating and making content in ways comparable to humans. It's called generative artificial intelligence (AI), and you can use it to excel in the workforce.

Generative AI can save you time, no matter what field you work in. It can create content for marketing, forecast numbers for finance, or code for software developers.

Publicists can use it write press releases. Health professionals can even use it to improve their diagnosis.

Our Goal

Our team has been engaged by one of the largest think tanks to help propose policy suggestions to help minimize the potential negative impact on the jobs, industry and personal data.

What is Artificial Intelligence?

Artificial Intelligence (AI) is a transformative technology that enables machines to converse, write, and reason in ways similar to humans. It is transforming work for professionals across sectors, through improved productivity, enabling creative work, and enabling strategic thinking.

Benefits of AI can include:

- Time-Saving & Boost in Productivity: By automating time consuming and mentally taxing activities, AI enables professionals to focus more on high level strategic work.
- Empowering Human Workers: Rather than replacing jobs, AI is made to serve as an augmentation device. Human creativity and oversight remain top priority, with AI as a powerful assistant.

AI Disclosure Policy

Policy Name: Mandatory AI Disclosure in Public Interactions

What is It?

Demand that businesses mark AI-generated material properly and alert consumers when they are dealing with AI systems (such as chatbots, emails created by AI, or videos created by AI).

Why It's Needed:

- People frequently interact with AI without realizing it.
- Unreported AI usage can result in dishonesty, improper use of data, and lost trust.

Impacts of the Policy

Jobs:

- Protects employees against AI's hidden replacement.
- Encourages fair competition between work produced by AI and by humans.
- Generates new employment opportunities in AI monitoring and compliance.

Industry:

- Promotes the use of ethical AI.
- Lowers a company's risk of legal trouble and damage to its reputation.
- Ensures transparency, which helps smaller businesses compete fairly.

Personal Data:

- Notifies users when AI is handling their data.
- Lowers the possibility of illegal usage of AI data.
- Favors stronger consent procedures.

How It Could Be Implemented

1. Labeling Requirements:

- Content produced by AI has to be clearly labeled, such as "Generated by AI."
- Applies to audio, video, text, and video.

2. Real-Time Disclosures:

- Alert users when they are interacting with a chatbot or getting written messages from AI.

3. Sector Enforcement:

- More robust enforcement in fragile areas: Healthcare, Finance, Recruitment And Education.

Insurance Mandate Policy

Policy Name: AI Liability & Risk Insurance Mandate Policy

What is it?

A policy that enforces a requirement that any company using generative AI must carry insurance in case their AI causes harm (bias, disinformation, data abuse, etc.). In case something goes wrong, somebody should be responsible.

Why it's needed?

- If an AI harms someone and the company claims it wasn't their fault, victims could struggle to win lawsuits. Insurance ensures quick, fair payouts.
- AI is unpredictable.

How to do this: determine what AI technology needs to be insured, work with insurance companies to craft policies, and insist on the rule for high risk industries (finance, recruitment, healthcare, etc.).

Impacts of the Policy

Impact on Jobs:

Protects workers from discriminatory AI decisions, and creates AI safety measures.

Impact on Industry:

Promotes safer and transparent AI use, and safeguards small firms.

Impact on Personal Data:

Encourages better privacy practices, and provides victims with more protection and justice.

Ethical Development Policy

Policy Name: Ethical AI Development Policy

What is it?

This policy would make mandatory the creation and use of ethical guidelines for generative AI development

Why is it Necessary?

- AI should not only be accessible but it should also be fair, just, and impartial
- AI is evolving quickly to actually learn and retain information about you, making what they do with this information extremely important

Impacts of the Policy

Jobs:

- New Jobs
- Non-Compliance -> Job Displacement
- Increased Demand for Training

Industry:

- Increased Operational Costs
- Competitive Advantage for Early Adopters
- Encouraged Collaboration

Personal Data:

- Stronger Protections for User Privacy
- Reduced Risk of Data Misuse
- Reduction or Elimination of Harmful Outputs

How it could be Implement

1. Certification-Based Regulatory Framework
2. Tax Incentives
3. Industry Self-Regulation w/ Government Oversight

Strict Data Privacy Protection

What is it?

This policy ensures that individual rights are prioritized over corporate or governmental interest in the development and deployment of AI.

Why it's needed:

Without strict privacy protections, people's personal data, can be abused, leaked, or misused by AI developers, corporations, and government.

Strict data privacy protection ensures that people own their data, control how it is used, and are protected from exploitation as AI becomes more powerful and intrusive.

Impacts of Strict Data Privacy Protection

Jobs:

Existing IT, legal, and compliance professionals would need training in AI specific data protection, opening up certification programs and new career pathways.

Industry:

With clear rules, companies can innovate faster without fearing unpredictable lawsuits or reputational disasters. Industries that face trust issues could rebuild consumers loyalty by proving they handle data ethically.

Personal Data:

AI decisions would be based on clean consented, and fair data meaning fewer discriminatory or harmful outputs. This will allow better security and anonymization standards making data breaches less damaging.

How it can be implemented

Legal and Regulatory Foundations

Governments must pass strong AI specific data privacy laws, establish independent agencies to enforce them.

Corporate and Technical Implementation

Companies must design AI systems with built in privacy protections. Ensuring all AI models are independently reviewed and certified for privacy compliance.

Public Awareness and Technology Innovation

Public education campaigns and investment in new privacy enhancing technologies are essential to empower individuals to control their data and minimize privacy risk from the start.

Conclusion

As artificial intelligence becomes increasingly integrated into daily life, the risk of misuse grows. Implementing AI policy ensures that AI systems are used ethically, transparently, and responsibly.
